

Antimicrobial Film

- Great for shared and high contact surfaces
- Film is protected from bacteria
- Very conformable, high-quality and easy to install
- Due to high demand our lead time is 4-8 weeks

Description

Antimicrobial Film is designed for high traffic touch points. The film is made in the USA and contains an antimicrobial agent to protect it against bacteria, mold, mildew and fungi. It activates with light, air pressure and the touch of a hand.

The film is very conformable, high-quality and easy to install. Available in die cuts for the most common surfaces as well as perforated rolls varying in 2", 4" and 7" wide sizes. The perforation allows you to remove the film from the roll without leaving residue.

Antimicrobial Film is nontoxic, waterproof and resistant to most chemical agents including: bleach, alcohol and common cleaning products. It is great for both indoor and outdoor usage on surfaces such as hand rails, doorknobs, buttons, shopping carts, and other high contact surfaces. It can also be used in industries like healthcare, hospitality, retail, aviation and government services.

Replace the removable adhesive film every 90 days for best results.

*Not tested to prevent transmission of COVID-19.

Additional information

Model Number	WFS-OS-AMF Antimicrobial Film
Applications	Appliance Labeling, Medical Equipment, Pharmaceuticals, Power Equipment Labeling, Small Engine Labeling, Electronic Equipment & Devices, Manufacturing, Safety & Compliance, Vehicle/Fleet Marking
Expected Outdoor Life	90 Days
Minimum Application Temperature	15°F
Temperature Service Range	-10°F to 200°F
Colors	Clear
Water Resistance	Excellent
Solvents Resistance	Excellent
UV Resistance	Very Good
Abrasion Resistance	Good
Oil Resistance	Very Good
Adhesion	Removable
Shelf Life	Stored at 70° and 50% Relative Humidity, 6 months
